"☕ GOLDEN GEESE 🦢 Tuesday, January 13, 2026 🦢 C&C NEWS 🧪" by Jeff Childers.

Welcome to a deep-dive exploration of the seismic shifts occurring in our modern world, where the battle for scientific integrity, economic stability, and geopolitical dominance is unfolding at breakneck speed. Today, we examine how "rapidity" has become the essence of a new era of leadership and how the "Golden Geese" of our society are being targeted, co-opted, or driven away.

The Corporate Capture of Science

We begin with a harrowing look at the lengths to which Big Pharma will go to protect its interests. Recently, a critical scientific paper—a roundup of **69 peer-reviewed studies linking mRNA shots to cancer**—became so "radioactive" that the online journal hosting it was knocked offline for weeks by sustained denial-of-service attacks. When digital suppression failed to bury the summary, the industry pivoted to a more sophisticated tactic: **co-optation**.

On January 5th, a senior recruiter from Pfizer reportedly approached the study's lead researcher, Brown University professor Dr. Wafik El-Deiry, with an offer for a senior oncology research position. In the world of high-level research, this is how the "system" actually functions; such a position would provide a massive budget and financial security, but it comes with a high price—a "small notebook jammed with **non-disclosure and non-disparagement contracts**" that would effectively silence the researcher regarding any problems with mRNA technology. This strategy aims to turn a principled scientist into a corporate asset, potentially requiring the withdrawal of damaging papers in exchange for "vacationing in the Hamptons". However, the very fact that Pfizer attempted to hire Dr. El-Deiry serves as the ultimate validation: they wouldn't try to recruit a "crank" or a "bad scientist," proving his research is a legitimate threat to their branded products.

The Great California Capital Flight

Turning to the domestic front, we see a "uniparty catastrophe" unfolding in California, where the state is witnessing a massive evacuation of its most productive citizens. Governor Gavin Newsom is currently struggling to "shut the barn doors" after the introduction of a **confiscatory wealth tax**. This proposed initiative would require Californians with a net worth over $1 billion to pay a one-time tax equal to **5% of their total assets**, on top of the existing 13.5% state income tax.

Crucially, the mere introduction of this retroactive tax has already caused a "backfire" of historic proportions. Estimates suggest that **half of California's billionaire wealth** hastily evacuated the state before the January 1st deadline to avoid the "Old West train robbery". High-profile CEOs from companies like **Netflix, Google, WhatsApp, and Stripe** are now reportedly shopping for luxury properties in Florida as they flee the "confiscatory tax tide". This self-destructive policy ignores the reality that the state budget relies heavily on these high earners, who pay most of the state's income taxes. By "murdering the golden goose" for a "gold omelet," the state is effectively dismantling its own financial future.

The Fracturing of the Democratic Party

This economic turmoil has exposed a deep **intra-party schism** within the Democratic Party, which is increasingly leaderless and fractured. On the West Coast, a "progressive Hunger Games" has begun as centrist Democrats like Newsom are forced into open battle against the unions and far-left groups pushing for the billionaire tax. Newsom, who preferred to keep this "blue-on-blue fight" behind the scenes, was forced to go public as billionaires fled in their private jets.

The source suggests this commitment to self-destruction may be the price of an "unreasoning commitment to **Diversity, Equity, and Inclusion**," where leadership roles are filled by "midwits" who prioritize victimhood over actual accomplishment. This lack of cohesive leadership has turned the nation's progressive heart into a "uniparty catastrophe" that drove out even the world's most productive entrepreneurs through "stupid pandemic policies" and destructive social media engagement.

Maximum Pressure: The Economic Assault on Iran

On the global stage, we are seeing a "rapid-fire remaking" of the Middle East through an innovative use of economic power. As the Islamic Republic of Iran faces a "palpable madness" of internal protests and economic mismanagement, the U.S. has dialed its pressure to an "11". Rather than using traditional military intervention, a **25% tariff** has been announced for **any country doing business with Iran**.

This "economic assault" effectively uses tariffs to achieve what a carrier convoy would—**regime isolation**. The impact is immediate: Iran's economy is on the ropes, experiencing near-hyperinflation, and the regime has resorted to military-grade electronic jammers to block internet access. Remarkably, there is a total lack of international support for the Iranian regime; European leaders in Germany and France are openly speaking of the "final days" of the regime, while traditional allies like Russia and China have offered only "lukewarm expressions of concern" without criticizing the U.S. directly.

The Essence of War: Strategic Rapidity

Everything we are witnessing—from the sudden movement of billionaires to the rapid-fire geopolitical shifts—aligns with the wisdom of Sun Tzu, who stated that "**rapidity is the essence of war**". By taking advantage of an enemy's unreadiness and attacking through unexpected routes, a leader can force an adversary to pick their battles and leave them "everywhere weak".

The world is currently being "re-engineered in real time," and the sheer speed of events has left the "globalist swamp" unable to decide how to respond. Whether it is the U.S. Navy cutting off Venezuela or the use of the "tariff dashboard" to isolate Iran, these moves are designed to weaken an enemy's alliances before they can even perceive the threat. In this "impenetrable fog of war," those who can act with the greatest speed and clarity of purpose are the ones who will shape the future.
